Evan Edwards
Co-Founder and VP of Product Development, Intelliject

Evan is Vice President, Product Development for Intelliject. He is a co-founder of Intelliject and is co-inventor of Intelliject’s technology platforms. He manages all areas of the invention and design process, including the company’s intellectual property portfolio. Evan has been recognized among his peers for his expertise and work in human factors engineering (HFE) and he is actively involved with the Human Factors & Ergonomics Society (HFES) and serves on the Medical Devices for Injection and Human Factors Committees for the Association of the Advancement of Medical Instrumentation (AAMI).

Evan is a graduate of the University of Virginia where he earned a B.S. in Mechanical Engineering and an M.S. in Systems Engineering with a concentration on HFE.

About Intelliject
Intelliject is a specialty pharmaceutical company pioneering the next generation of drug/device combination products. All of Intelliject's products are “developed by patients, for patients,” meaning that their team puts the human at the center of their design process and incorporates human factors and ergonomics into each product. Intelliject started with devices for delivering epinephrine, a topic of immediate relevance to Evan and his twin brother, Eric, who were both diagnosed with life-threatening allergies at a young age. Now, Intelliject’s technology platforms include a wide range of drug/device combination products.
